Crucible, High Alumina

Conical form, unglazed, 99.7% alumina crucible. Maximum use temperature is 1750°C. Made of 99.7% pure aluminum oxide. Highly resistant to chemical attack, this alumina-ceramic ware is especially useful to chemists, metallurgists and others involved in high temperature work demanding contamination-free results. Also available- cylindrical form.

Crucible, Quartz Glass

Clear quartz glass crucibles are useful for analytical applications that require ashing of samples. Quartz material offers low expansion, dimensional stability, and thermal shock resistance. Can withstand a continuous operating temperature of 1050°C (1922°F). Quartz crucibles can be made in custom sizes; please contact us for details.

Funnel, Buchner; Economy

Manufactured from thick walled borosilicate glass, funnels include a beaded rim and a fritted disc with coarse, medium or fine porosity. Porosity of Course(C) is 40- 60 Microns, Porosity of Fine (F) is 5-15 Microns, Porosity of Medium (M) is 15-40 Microns. Larger (80-120ml) funnels have medium porosity discs.

Mix/match within these codes:
 US = \$60 min. or \$5 charge
 EI = \$60 min or \$5 charge
 VG = \$80 min or \$15 charge
 LG = \$335 minimum
